2016

SINCE // 1986

AFTER 30 YEARS OF INNOVATION, THE FUTURE HAS ARRIVED.

When we founded DPMS Panther Arms three decades ago, our primary mission was to provide precision M-16, M-14 and M203 parts to the U.S. Army. And deliver we did, helping convert their standard-issue rifles into high-performance machines. Since then, our legacy of fearless innovation and limitless customization has continued to grow.

Today, we're the second-largest manufacturer of AR rifles, and proud recipients of five prestigious NRA Golden Bullseye Awards—more than any other MSR brand. But we're not stopping there. Above all others, DPMS stands for performance, accuracy and reliability—the result of three decades of never, ever being satisfied with “good enough.” That same spirit of aggressive advancement led us to create the GII, the bold new standard of MSR, and the forerunner of next-generation AR design.

We've come a long way since 1986, and have transformed the industry with every stride forward. The good news is: We're just getting started.

“WE HAVE
DEVELOPED
THE BEST AR ON
THE MARKET.”

Adam Ballard

Adam Ballard / DPMS Product Manager

The DPMS GII is the collective culmination of decades of experience in the shop, on the range, or in the field, chasing everything from wild game and titles to our nation's enemies.

The GII is all about taking a great product with a great history, and applying the best R&D methods to improve it. Making it simply the most advanced, most versatile and reliable AR platform you can buy.

Some other manufacturers are content with imitating, and might have stopped with a new forged receiver. But for us, that was just the beginning. We didn't just reconfigure another AR. We didn't just slap together a few aftermarket components or grow an existing rifle to a larger cartridge. We have fundamentally redefined the way the AR works.

UNFAILING RELIABILITY.

Revolutionary improvements make the GII the most reliable, longest lasting AR platform on the market. Key to this are: an all new elastomer extractor spring, new extractor material, dual ejectors, and a steel insert feedramp. These components fundamentally change the way the conventional AR functions.

THE BIGGEST REVOLUTION TO THE GII MIGHT JUST BE THE SMALLEST.

○ IMPROVED EXTRACTOR & ELASTOMER EXTRACTOR SPRING

Through countless hours of research, testing, and tens of thousands of fired rounds, DPMS selected:

- A new extractor material that is nearly impossible to break
- A patent pending elastomer extractor spring capable of enduring tens of thousands of cycles without fatigue, breakage, failure; can resist temperatures from -60°F to $650^{\circ}\text{F}+$; and resist every gun cleaner, solvent, oil or degreaser we could get our hands on.

▬ DUAL EJECTORS

Dual ejector system reduces ejector spring fatigue. Through duplication, the likelihood of a failed ejection is significantly reduced.

▬ STEEL FEED RAMP

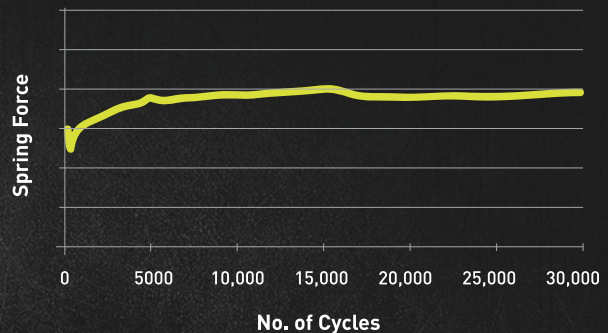

GII incorporates an inserted steel feed ramp, allowing a lighter, smaller barrel extension and receiver while improving feeding of more ammunition types.

▬ ENLARGED EJECTION PORT

Lengthened port allows for better, more consistent ejection.

DRY CYCLE ENDURANCE OF ELASTOMER SPRING

Elastomer Fatigue

NEW EXTRACTOR AND ELASTOMER EXTRACTOR SPRING PROVIDE OUTSTANDING FUNCTIONAL, ENDURANCE, AND ENVIRONMENTAL RESISTANCE IMPROVEMENTS.

ENHANCED EXTRACTOR SPRING RESISTS TEMPERATURES

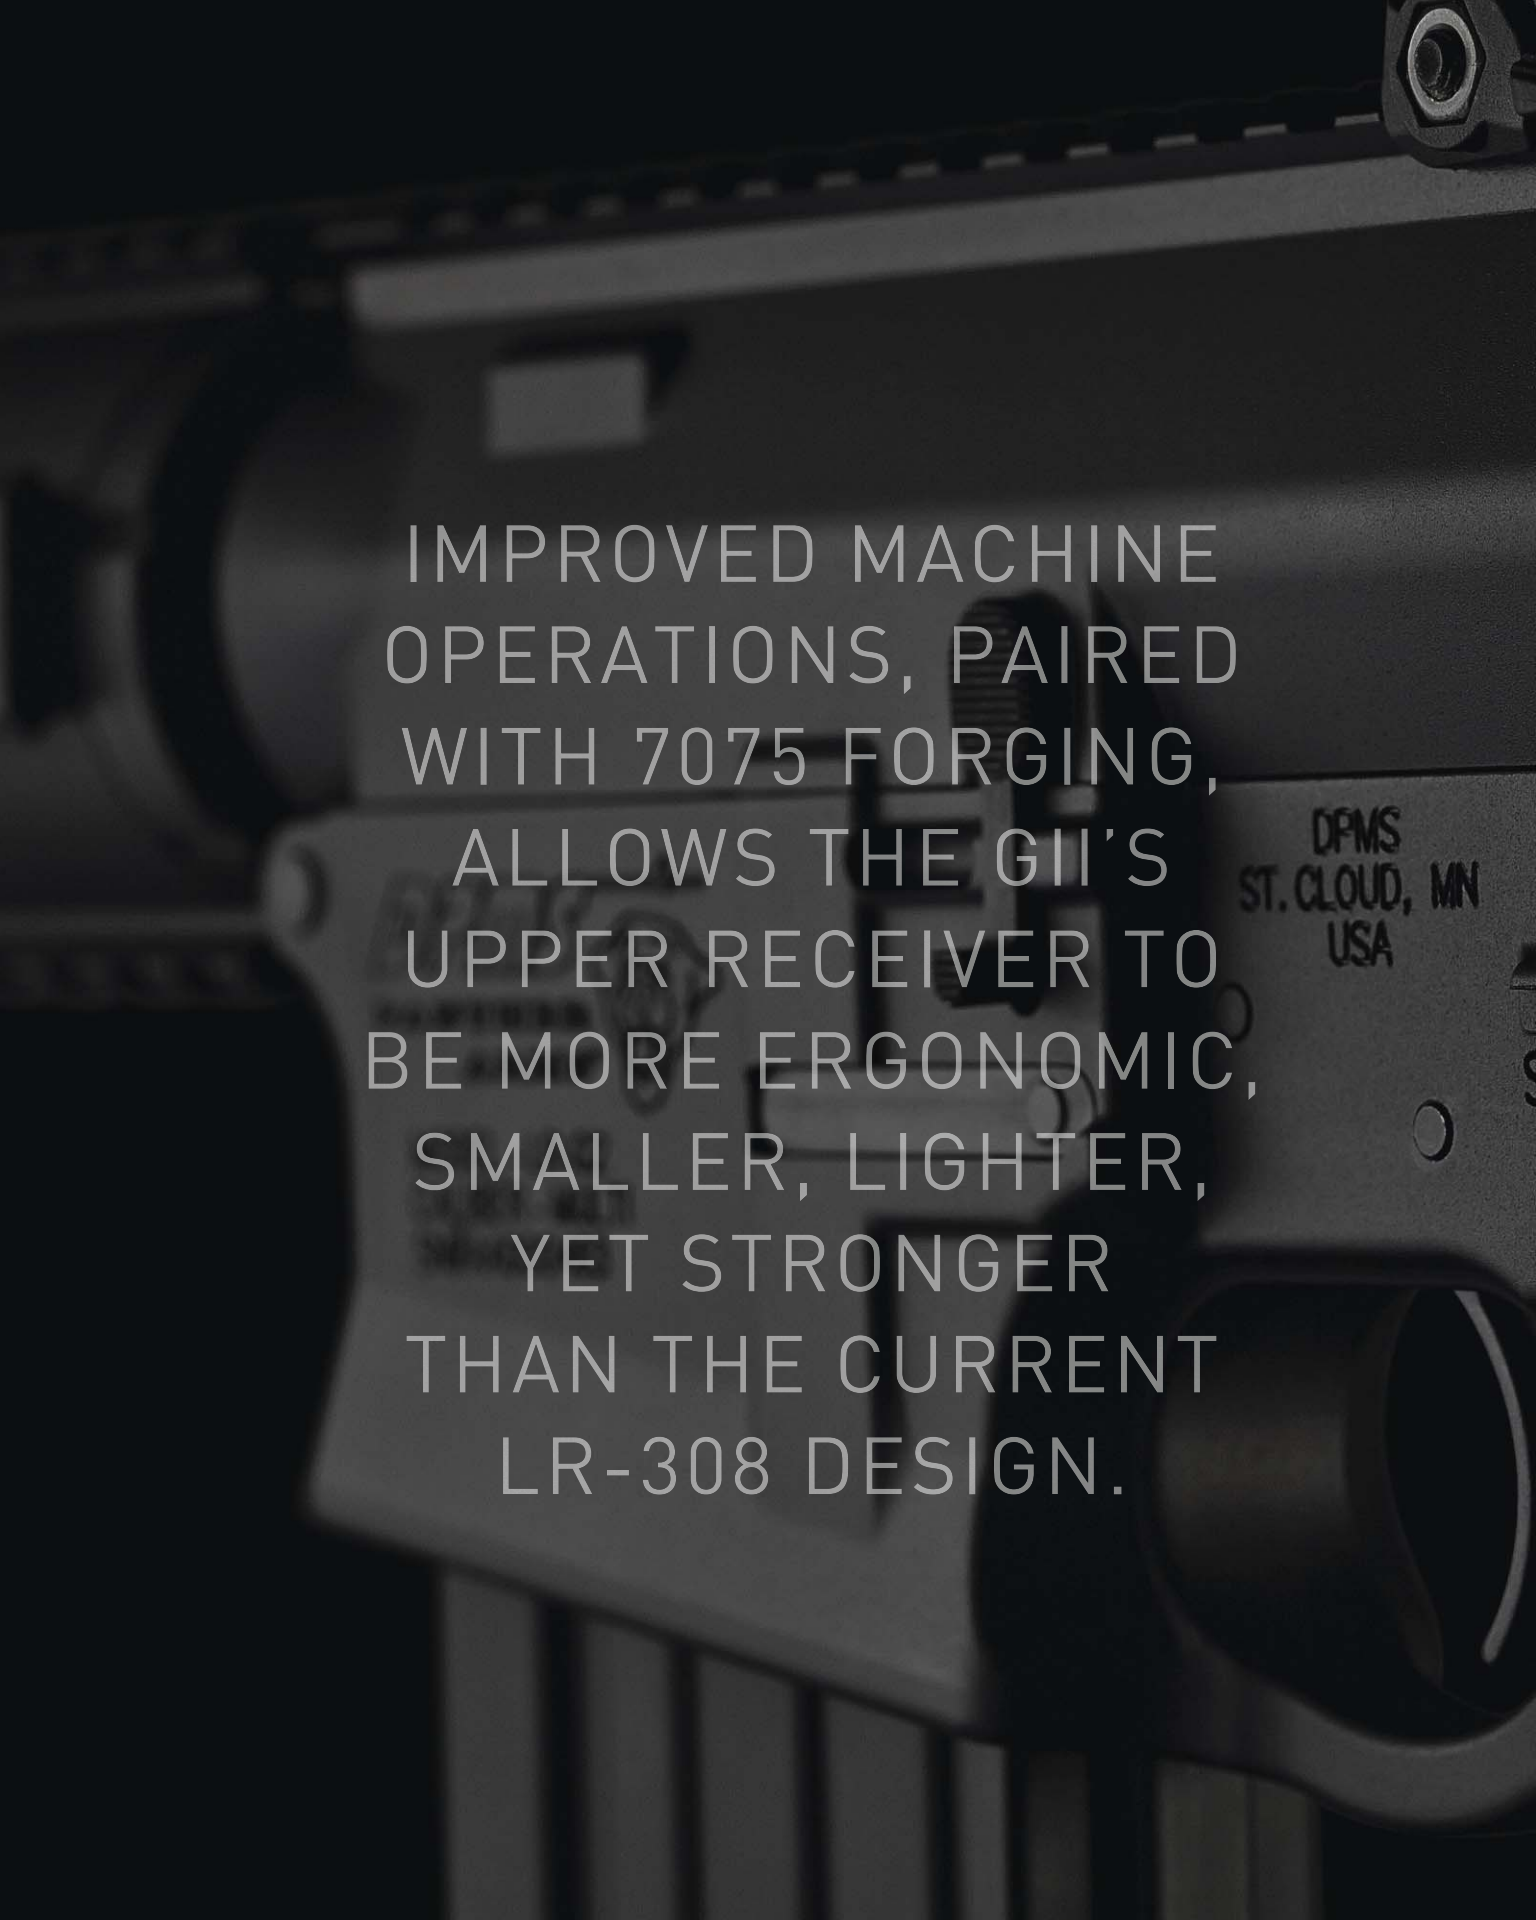

-60°F to $650^{\circ}\text{F}+$

IMPROVED EXTRACTOR &
ELASTOMER EXTRACTOR SPRING

THE RESULT

THE MOST CONSISTENT,
EFFICIENT, AND RELIABLE
EXTRACTION AND EJECTION
PATTERN OF ANY AR.

A close-up, black and white photograph of a rifle receiver. The receiver is the central part of the rifle that houses the action. It features a bolt handle on the left and a magazine well on the right. The text is overlaid in a clean, white, sans-serif font. On the right side of the receiver, there is a small, rectangular stamp that reads "DFMS ST. CLOUD, MN USA".

IMPROVED MACHINE
OPERATIONS, PAIRED
WITH 7075 FORGING,
ALLOWS THE GII'S
UPPER RECEIVER TO
BE MORE ERGONOMIC,
SMALLER, LIGHTER,
YET STRONGER
THAN THE CURRENT
LR-308 DESIGN.

DFMS
ST. CLOUD, MN
USA

BUTT TO BORE, THE RADICAL REINVENTION OF THE .308 MSR.

The heart of the GII is a matched pair of forged, level III anodized, Teflon coated 7075 receivers, providing improved strength and durability.

THE RIFLE SIMPLY FEELS BETTER WHEN YOU PICK IT UP.

○ FORGED UPPER & LOWER RECEIVERS

Forged upper and lower receivers are contoured to be more ergonomic. Compact design is both lightweight and only 1/2" longer than a 5.56 AR receiver, 5/8" shorter than the current LR-308.

Lower receiver incorporates integral trigger guard and accepts any standard AR pistol grip.

— REDUCED MASS, FORGED, MONOLITHIC BOLT CARRIER WITH FORWARD ASSIST

New lightweight, forged, monolithic bolt carrier utilizes an integral gas key tower and removable gas key extension.

△ REDUCED WEIGHT, YET LIGHTER RECOIL

Reduced mass carrier provides smoother, softer recoil impulse than the GEN1 .308.

⬡ IMPROVED BOLT AND BARREL EXTENSION

An all new bolt geometry provides superior lockup and strength. The bolt geometry allows a smaller diameter barrel extension to be used, in turn allowing upper receiver to be smaller, reducing overall material and weight without compromising strength.

▭ BEVELED MAG WELL

The beveled mag well provides a comfortable grip for those that prefer a mag well hold and also aids in quicker mag changes.

THE RESULT

WITH THE ADVANCEMENTS IN THE FORGING, FEED RAMPS AND BOLT GEOMETRY, THE GII HAS A SHORTER OVERALL RECEIVER LENGTH, AS WELL AS A REDUCED RECEIVER DIAMETER.

ADAPTABLE. VERSATILE.

With its adaptability in accepting standard AR fire control and more .223 two-piece handguards than before, the GII core also remains versatile in both tactical and hunting configurations. A true game-changer.

ALL THE ACCURACY YOU'D EXPECT FROM DPMS.

➤ INCREASED .223 PLATFORM HANDGUARD ADAPTABILITY

Accepts more 2-piece AR handguards than previous LR-308. Newly designed barrel nut allows the use of .223 diameter free float handguard systems.

☐ ACCEPTS STANDARD AR FIRE CONTROLS

DPMS GII rifles accept standard AR fire controls for even more adaptability.

☐ AN EXCEPTIONAL TACTICAL RIFLE

Contoured steel feed ramps, revolutionary redesigned extraction system, and a dual ejector design decrease feeding, extraction and ejection malfunctions.

Completely re-designed gas delivery system utilizes a monolithic bolt carrier and optimized gas ring clearances to eliminate the possibility of gas leakage during operation.

➤ DESIGNED TO HUNT

GII is specifically designed for the mobility required to have a successful hunt by achieving weight and length reduction when compared to the original, time-proven LR-308. The design of the GII has been optimized to function with all available hunting ammunition types.

THE RESULT

**DESIGNED TO
RUN FLAWLESSLY.**

AR FREE-FLOAT TUBES / HANDGUARDS

CARBON FIBER FREE-FLOAT TUBES

STANDARD & CARBINE

The 2" diameter carbon fiber free-float handguards from DPMS stay cooler than the standard aluminum free-float tubes and weigh less, 40% less, providing you with a unique alternative to the traditional handguard. The carbon fiber utilized in these free-float tubes works in two ways: internally the unidirectional carbon fiber increases the strength and stability of the tube while externally the bi-directional carbon fiber provides a textured look and feel.

The Picatinny style rails are integrally machined into the free-float tube. The Picatinny rails are designed for the attachment of foregrips, flashlights, optics or any other type of rail-mounted accessories. The tube is also vented with 16 individual vents for increased airflow to the barrel.

DPMS™ M111 MODULAR HANDGUARD SYSTEM

The M111 is a modular, lightweight, free-float handguard designed for use with .223/5.56 or .308 AR-pattern rifles. Machined from 6061 aluminum alloy, the M111 features threaded steel inserts around the handguard to allow secure attachment of Picatinny rail sections for a wide range of accessory mounting options. Offered in 3 lengths, each M111 comes with two (2) short and one (1) long Picatinny rail section. All mounting hardware included.

.308 FREE-FLOAT TUBES / HANDGUARDS

4-RAIL FREE-FLOAT TUBES

FOR LR-308 RIFLES

The .308 cal. version of the 4-rail free-float tube features a solid one-piece free-float tube made from 6066-T6 aluminum. The Picatinny style rails are integrally machined into the free-float tube. Two rail heights are available, one for the A3-style upper receiver and the other for the original LR-308 upper receiver. Each rail height is available in two lengths, standard and carbine. The free-float tubes are vented and hard coat anodized per Mil Spec and matte black in color. Overall width dimension is 2.1," only slightly wider than the AR-style free-float tubes and include a manganese phosphated steel locking collar to control the timing of the rails.
